This diagram shows the overall dimensions of the Treadwall M4 Pro. The height is 120 inches, and a slight clearance (about 1 inch) over this height is strongly recommended. In cases where a suspended ceiling as low as 104 inches is in place, there is often sufficient clearance above the ceiling, and a simple 40 x 60 inch hole in the tiling, located as shown in the left diagram, will allow room for the top of the Treadwall.
