

**Gecko wall mount options:**

**Option 1: Direct wall mount.** If the wall is structurally reinforced, the Gecko panels may be mounted directly to the wall with suitable anchors. This is the most economical means, with one drawback - There will be no belay anchors. Belayes can be mounted to ceiling joists etc. by the purchaser if structure allows.

**Option 2: Wall mount frame.** If the wall is structurally reinforced to allow mounting ledgers at the 10 ft. and 21 ft. levels, the Gecko can be mounted with a wall mount frame that provides structure for the wall and belay stations at the top. Cost is more than option 1, less than option 3.

**Option 3. Full frame:** If the wall is non structural, the Gecko can be provided with a full frame that only needs mounting at the top of the wall and the floor. You will need structure to tie into at the top of the wall for this option.

**Base of Gecko -  
approximately 4  
foot radius.**

**Gecko tower with landing area**
